

## ERRATUM

**AFJ volume 104 issue 2, pp. 25–48 (April–June 2014)**

On page 42 of the *American Fern Journal* article entitled **Cultivation Techniques for Terrestrial Clubmosses (Lycopodiaceae): Conservation, Research, and Horticultural Opportunities for an Early-Diverging Plant Lineage** by Jeffrey P. Benca the statement “Under such situations, using sodium-softened or distilled water may be necessary to provide neutral to acidic conditions ( $\text{pH} \leq 7.0$ ) (Husby, pers. comm.).” is incorrect and should state “Under such situations, using uncontaminated rain-, steam-distilled, deionized, or reverse osmosis water may be necessary to provide neutral to acidic conditions ( $\text{pH} \leq 7.0$ ), but sodium-softened water is not suitable due to buildup of excess salts (Husby, pers. comm.).”
